

Guiding you to successful corporate sustainability reporting

Our expert support makes it easy to embed nature and sustainable action into your business strategy.

Nature underpins every aspect of a resilient and sustainable business. Each business has its own unique relationship with nature, relying on nature's ecosystem services in different ways across its operations and supply chain. This dependence brings exposure to increasing risks: from climate change, biodiversity loss and extreme weather events, to tightening regulatory and investor expectations. The significant financial risks of nature degradation are becoming increasingly recognised, and nature now sits alongside climate change as a core strategic risk management issue.

Nature-related risk disclosure is increasingly being embedded in legislation and policy. With increasing external pressures, this is filtering through to your senior leaders and board members.

At SAC Consulting, we provide robust, evidence-based support for your corporate sustainability reporting. Utilising the most up to date standards, guidelines and frameworks, we will guide you through sustainability reporting to ensure that your business reports are completed to a high standard which aligns with disclosure frameworks. Including:

- Corporate Sustainability Reporting Directive (CSRD)
- Taskforce on Nature-related Financial Disclosures (TNFD)
- Global Reporting Initiative (GRI)
- Science Based Targets initiative (SBTi)
- CDP and other ESG frameworks

Our team of nature, carbon and sustainability specialists can help you evaluate how your business interacts with nature, identify material risks and opportunities, and develop actionable nature and climate positive transition plans. We apply the TNFD LEAP framework to help your business manage nature-related risks and opportunities:

- L** – Locate your interactions with nature
- E** – Evaluate your nature-based dependencies and impacts
- A** – Assess material risks and opportunities
- P** – Prepare a nature-positive transition plan

SAC Consulting brings together specialists with a deep understanding of agriculture, land use and business strategy. Our support helps you align nature reporting with your corporate objectives. From the ground to boardroom, we can help your business navigate reporting standards and frameworks to ensure that they are compliant.

How we can help

- Assess and navigate your nature dependencies and impacts into an actionable transition plan for future business resilience
- Aligning sustainability reporting with frameworks such as CSRD, TNFD, GRI, CDP and TCFD
- Produce Environmental, Social and Governance (ESG) strategies
- Recommending robust, evidence-based metrics for internal tracking and external reporting
- Effectively monitor and report on environmental net gain (including biodiversity, carbon, soil, air, water), carbon management (GHG mitigation and management interventions) and climate risks
- Enhancing reporting integrity to avoid greenwashing and build stakeholder trust
- Support baseline assessments using multi-metric, site-specific approaches
- Onsite evaluation and ground truthing where appropriate
- Provide environmental and sustainability credentials.

From your first ESG strategy to more complex sustainability disclosure, we can provide practical, actionable support tailored to your sector.
